

Directions to Cell Imaging at Skaggs Biology, Building 82

The Cell Imaging Core maintains a Leica Cryostat in room 230 of the Aline Wilmot Skaggs Biology Building (ASB), Building 82. We also provide scheduling and access for the Vutara microscope.

ASB is between the Biology Building and Performing Arts. If you are not familiar with the location, please use the campus map (<https://bit.ly/2bZAbjq>).

Room 230 is on the ground floor of ASB, in the research area. Enter ASB through the main South West doors. Enter the research area through the doors beside the coffee shop. Turn left and go down the long hall that ramps down and back up, through the doors, turn right and you are the door to 230. The Cryostat is at the West end of the first bay. The Vutara is against the East wall.

There are exterior doors on the map that also lead to Room 230. These, and room 230, require card access.
